

Money Card — Developer 2 Backend Handover Pack (M0 V10 Frozen)

Welcome! This folder contains the **complete, implementation-ready API specifications, JSON contracts, database models, Postman test collection, seed data, and official M0 V10 specification PDF** for building the Money Card backend.

■ Package Contents

developer-2-handoff-pack/

```
■
■■■■ M0_Updated_V10_Developer2_Complete_API_Contract.pdf <!-- ■ Official M0 V10 PDF (Single Source of Truth)
■■■■ README.md <!-- ■ This Guide
■■■■ DEVELOPER_2_HANDOFF.md <!-- ■ Architecture, Prisma Schema & Implementation Steps
■■■■ API_CONTRACT_TEST_REPORT.md <!-- ■ Master Endpoint Blueprint (Request/Response JSONs)
■■■■ COMPLETE_ENDPOINT_INVENTORY.md <!-- ■ Quick Route & Permission Matrix (52 Endpoints)
■■■■ API_CONTRACT_GAPS.md <!-- ■ Frozen Rules & Removals (No transaction_limit, no tags)
■
■■■■ POSTMAN_COLLECTION.json <!-- ■ Postman v2.1 Test Suite (All 52 Endpoints)
■■■■ ERROR_CONTRACTS.json <!-- ■ 21 Standard M0 Error Envelopes & HTTP Codes
■■■■ TEST_DATA.json <!-- ■ Multi-Tenant Seed Fixtures for Postgres DB
■
■■■■ api-contracts/ <!-- ■ Individual JSON Contract Files (By Module)
    ■■■■ common/ <!-- Success, Error & Pagination Envelopes
    ■■■■ auth/ <!-- Login, Refresh, Logout, Me, Passwords
    ■■■■ admin/ <!-- Orgs, Plans, Subscriptions, Overrides, Plan Requests
    ■■■■ branches/ <!-- Branch CRUD
    ■■■■ staff/ <!-- Staff CRUD, Branch & Permission assignment
    ■■■■ permissions/ <!-- 20 Frozen Permission Codes
    ■■■■ cards/ <!-- Card issue, QR resolve, Block/Unblock, CSV template
    ■■■■ card-sessions/ <!-- Session create, Recharge (CASH/UPI), Purchase, Return
    ■■■■ products/ <!-- Multi-select categories, pricing (no tags)
    ■■■■ inventory/ <!-- Adjustments, 3-column CSV template, Preview, Commit
    ■■■■ analytics/ <!-- Aggregated metrics, PDF export
    ■■■■ reports/ <!-- Formal PDF report downloads
    ■■■■ subscriptions/ <!-- Org subscription tiers & payments
    ■■■■ plan-change-requests/ <!-- Upgrade / Downgrade requests
    ■■■■ public-user-portal/ <!-- Public QR resolve, short-lived portal JWTs, receipts
```

■ Quickstart Guide for Developer 2

1. Review the Core Rules (M0 V10 Invariants)

- **Plans:** No [transaction_limit](#). Transactions are unlimited per tier. Monthly transaction counts are for analytics/reporting only.
- **Products:** No [tags](#). Categories are multi-select [string\[\]](#) (pipe-delimited [Veg|Fast Food](#) in CSV).
- **CSV Import:** Exactly 3 columns: [itemName](#), [category](#), [price](#). Branch ID is sent in the request context.
- **Reports & Analytics:** Exports are **PDF download only** ([application/pdf](#)).
- **Cards:** Initial state is [AVAILABLE](#). Issue transitions to [ACTIVE](#). Settle refunds remaining balance and returns card to [AVAILABLE](#).

2. Set Up Database with Prisma

Open [DEVELOPER_2_HANDOFF.md](#) to review the recommended Prisma schema and PostgreSQL models.

3. Seed Local Database

Use the multi-tenant fixtures in [TEST_DATA.json](#) to populate your local database.

4. Build Endpoints Matching JSON Contracts

- Match request bodies and response envelopes with files in [api-contracts/](#) or [API_CONTRACT_TEST_REPORT.md](#).
- Return standard errors matching [ERROR_CONTRACTS.json](#).

5. Validate with Postman

Import `POSTMAN_COLLECTION.json` into Postman and run against `http://localhost:4000/api/v1`.

6. Connect with the Frontend

In the frontend repository, set:

```
VITE_USE MOCK_API=false
```

```
VITE_API_BASE_URL=http://localhost:4000/api/v1
```

The frontend is 100% synchronized and will immediately connect to your live backend!
